Welcome to Gator Concrete Gainesville, the contractors you are looking for to deliver on your concrete projects, both residential and commercial, in Alachua county, Florida. We combine old school skills with in depth knowledge of the latest developments in the industry to ensure that our concrete flooring and parking lots look great and last long.

Gator Concrete Gainesville are a team of highly skilled, qualified, and insured concrete contractors ready and able to take on any concrete flooring job no matter how big or small in both residential and commercial sectors. We know you've got a choice when it comes to what kind of surface you have installed and that's why we're keen to explain to you just what we can offer and what modern concrete can deliver on that rivals including asphalt simply cannot. We have the expertise to mix and pour exactly the kind of concrete you need to complete your construction project and our product is built to last. So for crack free, perfect looking, long lasting concrete we are the professionals you want to talk to.

We are concrete experts and if you still think concrete is that drab gray stuff they make bunkers out of then we're here to show you what can be done with modern concrete. While still retaining all of its legendary toughness and longevity modern concrete now benefits from new additives, stamping techniques, and acid staining which together mean an infinite range of styles for your concrete project. So while these are a few of our most in demand concrete services you should get in touch for any concrete construction project and find out what we can offer you.

Sure, asphalt is cheaper to install but concrete outlasts it by a decade or two and over the long haul that means maybe you pay less but then you get to pay twice with asphalt. We create great looking and really long lasting driveways with more than enough toughness to handle any amount of axle weight or footfall. Plus our eye-catching designs and colors mean we can have that driveway take its theme from your house structure itself and flow naturally into your patio or home exterior. For curb appeal, property value, and day to day practicality our concrete driveways are winners.

We're often called in to repair the cracks that appear in old concrete or concrete that wasn't perfectly poured by other contractors. Not a problem. From simple crack repair to cut out and patch or a full remilling of the surface layer and an application of new concrete screed, we can take any old and impaired concrete surface and return it to a better than new appearance. We don't just plug holes either – whenever we're called on to make repairs we start by a full on site assessment as we try to work out exactly why the repair was needed in the first place. Wherever possible we aim to not only repair the damage but also address the root cause and tackle the underlying problems.

Your patio is your living space outdoors and should be a point of pride and an area you take pleasure in entertaining your family and friends. We can create elegant patios in any style from Spanish pavers to European fan cobbles and ensure that not only does it physically flow perfectly into other features such as poolsides but that stylistically it is completely harmonious with your home. Ask us about other outdoor concrete features such as fire pits and pathways.

Concrete stamping means that you get all the benefits of concrete – its affordability, durability, and longevity – but with pretty much any look you want. That could be wood, pavers, slate, rough stone, or cobblestones and we can stain and color it to any tone you like which makes our stamped concrete floors and hardscapes as beautiful as they are hard wearing.

Don't put up with uneven or cracked garage slabs. We put the preparation effort in to ensure perfect subgrade with compacted subbase and proper footing, reinforcement, and vapor barriers to ensure that your slab remains dry, solid, and level no matter how hard it has to work.

We are experts at commercial concrete including, but not limited to, polished concrete, exposed aggregate and specialist concrete mixes such as self consolidating concrete which makes it possible to pour perfect concrete even into narrow spaces with a lot of rebar. Our superplasticizing mixers mean that we can do that without vibration as we pour and all without having bubbles or risking the aggregate separating out from the cement. Which means great looking, hard wearing concrete for your commercial needs, no matter how big or how technical. Ask us about how our commercial concrete stamping and staining means that your concrete floors can perfectly match any brand image, corporate color scheme, or logos.
